TABLE OF CONTENTS

MAKING SAFETY THE PRIORITY

Introducing our transit decal catalog based on the nationally accepted safety standard developed by the American National Standards Institute, Inc. (ANSI).

Using a structured design process that considers language, instructional symbols, standard safety colors and ADA/DOT regulations, we have put together a set of decals that cover all things safety on a transit vehicle.

Having the right safety decals keeps your passengers, operators, maintenance technicians and employees safe while preventing regulatory hassles and litigation.

DECAL DESIGN OVERVIEW

SYMBOLS

Three distinct principles are used to convey intended safety symbol meaning: consistency of visual design, legibility, and comprehensibility.

Human Figure
The basic human figure is based on a grid system composed of uniform squares, or units.

International Symbols
AIGA accepted and regulated international symbols always used as the best option.

SIGNAL WORDS

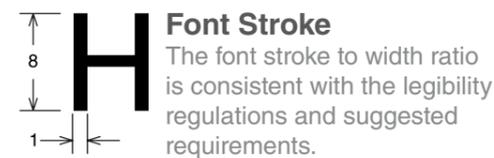

Signal words are classified according to the relative seriousness of the hazardous situation.

- DANGER** The hazardous situation **WILL** cause serious injury or death.
- WARNING** The hazardous situation **COULD** cause serious injury or death.
- CAUTION** The hazardous situation **COULD** cause minor or moderate injury.
- SAFETY** The information is an instruction or a procedure.
- NOTICE** The information does not reference a hazardous situation.

WHITE BORDER
The white border contrasts most transit surfaces.

FONT
Consistent with legibility regulations and suggested requirements. One font is used on all decals (Univers).

CORNER RADIUS
To achieve prolonged life by preventing vandals from picking sharp 90° corners.

WORD MESSAGE PANEL
Size is determined by viewing distance. To reduce the amount of words, the message is written in a headline style and in an active voice, avoiding prepositional phrases.

SAFETY COLORS
Only ANSI safety colors are used on safety standard decals. Colors are classified according to the hazardous situation, as listed above.

- SAFETY RED
- SAFETY ORANGE
- SAFETY YELLOW
- SAFETY GREEN
- SAFETY BLUE
- SAFETY BLACK

MATERIAL INFORMATION

THE SOLUTION FOR INTERIOR TRANSIT SURFACES

STG Vigor is the solution for common interior surfaces found in the transit industry. Designed and tested to adhere to surfaces like ABS plastics, stainless steel powder coated material, and others that traditional vinyl has difficulty sticking to.

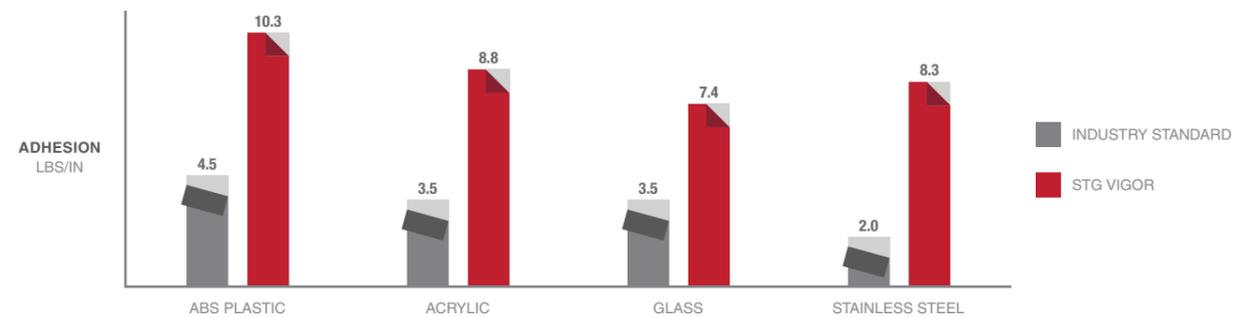

PERFORMANCE

Recently transit vehicle interior substrates have changed to specialized plastics in order to meet weight requirements. Standard adhesives, which worked well in the past, are no longer adhering properly. We developed STG Vigor to increase performance on those low surface energy interior transit plastics. With an unconditional 5-year warranty, you can expect your STG Vigor decals do what they were designed to do: stick vigorously.

ADHESION STRENGTH

Measured by the lbs./in. required to peel off of the indicated substrate.

THE IDEAL PERMANENT OPTION

Aluminum plates are the ideal option for permanent long-term messages. They resist abrasion, humidity, corrosive atmospheres, solvents and fuels.

Because of their durability and longevity, metal plates are commonly used for emergency exit information. All of our metal plates are manufactured to meet or exceed all federal guidelines for the transit industry.

NIGHT-TIME AND LOW LIGHT SAFETY SOLUTION

STG Safety Reflective was designed specifically to be highly visible at night when stricken with artificial light such as that from vehicle headlights. This unique reflective property is what makes road signs legible after dark without electric illumination.

PERFORMANCE

STG Safety Reflective increases exterior graphic visibility in dark and low-light situations, allowing emergency or maintenance personnel to easily identify and understand the safety messaging. By combining the highly reflective properties and the easy-to-clean gloss finish, STG Safety Reflective puts safety as the top priority in all lighting conditions.

STG Safety Reflective is not self luminescent and its reflective properties aren't apparent in typical daylight conditions.
